NARROW NECK BOTTLE SERIES 301 LDPE

Flexible Squeezable Good shape-retaining properties Leakproof

The packaging concept of Kautex for narrow, medium and wide neck laboratory bottles consists of consumer-optimized order units.

Closures and bottles are packed together as one unit and can be ordered in an uncomplicated manner with one article number. This results in the following advantages for both dealers and end users.

- One article number for bottle and closure
- Better and clearer handling of the ordered goods
- Dust-free and undamaged packaging
- Easier and quicker to commission bottles and closures
- The end-user receives original packed merchandise

Packaging concept:

| up to 100 ml: | Closures are packed in a polybag which |
|---------------|--|
| | is included in the bottles polybag. |

- from 200 ml: Bottles are stretched in toil, corresponding number of closures in a separate polybag in the box.
- from 2,000 ml: Bottles packed loosely in the box with screwed-on closures.

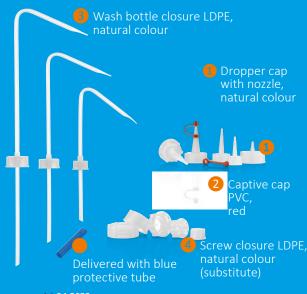

) Suitable for food

Three types of closures for different applications

🕙 Ideal for liquids.

<u> H</u>andy shape.

"Recycling symbol" in accordance with Directive 97/129/EC and 94/62/EC.

🕅 Crystal clear presentation of your product.

Ribbed sides for secure grip.

Post-Consumer-Recycling_

The German Packaging Act (VerpackG), the Plastic strategy of the EU, the Green Deal and the plastic tax are all initiatives and guidelines with a focus on promoting the circular economy. The aim is both to increase the recycling rate and the recyclate use. We also want to make our contribution and help contribute to the promotion of the circular economy.

What drives us?

Environment protection

The circular economy enables a more efficient use of raw materials. This leads to a reduction of CO_2 -emissions and to a reduced usage of mineral oil.

Scarcity of resources

Since our resources are limited, and demand continues to rise due to a growing world population the circular economy offers a significant contribution to the reduction of plastic waste.

We give plastic packaging a second life.

Sustainable packaging solution at the same high quality:

For our customer Kiehl we manufacture the 5 l jerrycan from 100 % PCR-HDPE material in serial production.

Your benefits!

Strong external impact

A sustainably produced packaging offers a great potential for effective sustainable marketing.

Cost reduction

By using PCR material, disposal costs are reduced and the plastic tax can be avoided.

Test facility

with retrieval system, presses, transport and manufacturing.

Quality standards like "virgin" material.

Our Experience!

Continuus contact with recyclate manufacturers for maximum product quality.

You are interested in one of our standard PCR products? Our sales team will be happy to answer your questions.

Know how and competence_

for successful products

KAUTEX Textron has been specialised in manufacturing extrusionblown plastic containers for more than eight decades.

Goal-directed with uncompromising standards for quality and customer focus, we have made our products to belong to the most successful on the international market.

We are meeting the challenges of tomorrow by resolutely leveraging the capacity for innovation and technological leadership in plastics processing of our international group.

Standard Packaging

- Successful products for laboratories, chemical industries and pharmacy
- Many versions, sizes, materials, accessories
- For special applications also possible with barriers (coex, fluorination)
- Available from stock
- Many models available with UN approval

Special Packaging

- Bottles and jerrycans made of PE, PP, PVC and PETG; for special applications also available with barriers (coex)
- The customer determines the design and pays for the mould; the products are supplied only to this customer
- UN approval availabl
- Rapid Prototyping concept

Jerrycans

- Jerrycans: 2 I/2.5 I/3 I/5 I/6 I/8 I/10 I/12 I/15 I/20 I/25 I/30
- Available from stock
- UN approval available

AgroPack[®] Product Range

- Jerrycans for crop protection agents: 5 I/10 I
- Bottles for crop protection agents: 250 ml/500 ml/1,000 m
- Available with and without barrier (coe
- UN approval available

Intended use of products_

materials at kautex

The bottles and containers in this catalogue are, if not labeled otherwise, suitable for foods and satisfy the European requirements of Regulation (EC) No. 1935/2004 and Regulation (EU) No. 10/20111. The bottles and containers can therefore be used within the European Economic Area as food packaging. We would be glad to provide the corresponding declarations of conformity upon request and recommended closures which are safe for contact with foods and would be suitable for your applications. Our products are produced with GMP standards Regulation (EC) No. 2023/2006 (of 22 December 2006) on good manufacturing practice for materials and articles intended to come into contact with food as amended in mind.

The bottles and containers in this catalogue satisfy the European legal requirements for packages for cosmetic goods according to Regulation (EC) No. 1223/20091. They are therefore permissible for use within the European Economic Area as packaging for cosmetic products. The conditions for use and notices regarding safe use found in the respective declarations of conformity and product data sheets must be observed.

Our UN packagings satisfy the legal requirements of the GGVSEB and the European agreements ADR, ADN and RID for the carriage of dangerous goods by road, rail and inland waterways. The UN dangerous materials packagings satisfy the requirements of European chemical law for packages for hazardous substances and mixtures according to Regulation (EC) No. 1272/2008.

They are therefore permissible for use within the European Economic Area as packaging for hazardous substances and mixtures. The provision and notices regarding the proper use of the packaging according to the UN permits of the Federal Institute for Materials Research and Testing (BAM) must be observed.

Our products can frequently also be used or adapted for purposes other than those cited. We possess our own productions facilities in which packages of pharmaceutical and medical products can be produced in accordance with GMP standards for pharmaceutical products and medical devices pursuant to Directive 2003/94/EC and Directive 93/42/EEC.

If you have a use in mind for pharmaceutical and medical purposes or a use that deviates from the above, please contact us so that we can find a solution tailored to your needs. The same holds true for uses outside of the European Economic Area and for UN dangerous goods packages that fall outside of the territorial scope of the European agreements ADR, ADN, and RID. Without consulting with us, any uses that deviate from the proper uses listed above lie in the responsibility of the user.

Registration

As we are manufacturing products according to the REACh regulation, we are not directly affected by the registration. However our suppliers are subject to this obligation and we are working closely with them.

Substances of Very High Concern – SVHC

The currently applicable SVHC list (candidate list) defines substances for which there is a registration obligation to customers and downstream users. According to article 33 of the REACh regulation, the manufacturing company shall "supply to the consumer all information available to him concerning the safe use of the product, and shall at least supply the name of the relevant substance".

Substances of REACh Appendix XIV and XVII

Based on the substances defined in the candidate list, the EU discusses which of these substances require authorization. In cooperation with our suppliers, we are launching appropriate activities in case that our products contain substances listed in Appendix XIV so that they have to be replaced.

Restrictions are listed in Appendix XVII

The restrictions are very specific and often combined with limit values. Again, Kautex is in close contact with our suppliers in order to ensure compliance with the material restrictions. You will find more detailed information related to REACh at http://echa.europa.eu/

Without UN permits, our products may be used for packaging for hazardous substances and mixtures according to Regulation (EC) No. 1272/2008 only if the user can guarantee that the requirements according to Article 35 of this regulation are observed. This check must be performed by the user on his or her own responsibility. In particular, the user must make sure the respective content does not damage the materials of packages and closures or react with these materials to form dangerous compounds.

Compliance with RoHS regulations

Packaging produces by Kautex complies with the Restriction of Hazardous Substances EU-Guideline 2011/65 incl. EU 2015/863 of the European Parliament and Council of June 8th,2011 on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

The aim of the RoHS EU-Guideline 2011/65 is the protection of human health and environment. The substances mentioned in the Guidelines include lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls, and polybrominated diphenyl ethers.

Polyolefins (PE): LDPE, HDPE, PP

- Physiologically inert
- Flexible and inherently stable
- Good chemical resistance
- Shatter-proof
- PP is autoclavable

Polypropylen (PP)

- Rigid and inherently stable
- Very good chemical resistance
- Features a very good resistance against tension cracking
- In thin layers almost transparent, thicker layers are translucent up to opaque white

Low-density Polyethylene (LDPE)

- Flexible, tough and shatter-proof
- In thin layers almost transparent, thicker layers are translucent up to opaque white
- Resistant to water, aqueous solutions

High-density Polyethylene (HDPE)

- Rigid and shatter-proof
- Slightly transparent in thin layers, in thicker layers weakly translucent to opaque white
- Resistant to water, aqueous solutions and most chemicals
- Excellent water vapour resistance

Polyvinyle chloride (PVC hard)

- Physialogically inert
- Crystal-clear or transparent brown
- Good chemical resistance
- Extremely rigid, high breaking resistance
- High transparency
- Resistant to water, aqueous solutions, alcohols and oils
- Slight gas permeability, e.g. to oxygen
- Adequate water vapour resistance in most cases

Co- Polyester (PETG) (Polyethylene Terephthalat Glycole)

- Pysiologically inert
- Flexible and inherently stable
- High transparency (glass-clear), optically brilliant
- Shatter-proof
- Resistant to water, aqueous solutions, salts,
- Aliphatic mediums, hydrocarbons and oils.

Usage instruction

for bottles, jerrycans and closures

1. General Information

This usage instruction contains important information in connection with German law governing product safety in order to ensure the safety and protect the health of users. It must be ensured that this information is brought to the attention of the users (Directive 2001/95/EC on General Product Safety).

In the case of UN dangerous goods packaging, all stipulations and notes on the respective UN approval relating to proper use of packaging are to be respected and communicated to any and all parties using this packaging for dangerous goods. Only the respective closures licensed in the respective approval may be used. UN approvals can be viewed at the homepage of the Bundesanstalt für Materialforschung und -prüfung https://app.tes.bam.de/php/d-bam/ index.php?id=zulassung

2. Storage

The recommended storage temperature for bottles/jerry cans should be between + 5 °C and +40 °C. Higher temperatures may cause deformity of the bottles/jerry cans.

The bottles/jerry cans must not be exposed to direct sunlight in order to avoid the containers' mechanical properties being negatively affected.

3. Use / filling

The unused bottles/jerry cans should only be used up to 5 years after the production date.

Please make sure that the packaging and in particular the sealing zones are not damaged/negatively affected when emptying and filling the containers. Avoid any and all mechanical or thermal damage to the bottles/jerry cans. Please use the degassing closures for gaseous goods.

We recommend to use specific knifes/cutter with a "safe blade" to open the stretch film to avoid any damage to the product.

4. Filling hot substances

Do not stack the bottles/jerry cans while they are still warm. The bottles/jerry cans may only be closed after having cooled down, or only with a degassing closure in order to ensure pressure equalization.

The bottles/jerry cans should be able to cool off quickly. If they maintain higher temperatures (60–80 $^{\circ}$ C) for a lengthy period, it could cause permanent deformation of the jerry cans. The bottles/jerry cans must be filled in an upright position on a level surface. Floors or areas with openings or unsuitable pallets (light pallets) should be avoided.

Ensure the packaging container is securely positioned and fill the filling product into the filler opening provided for this purpose at atmospheric pressure. If the filling temperature should ever exceed 40 °C, consult the supplier of the packaging container beforehand. To prevent vacuum deformation when cooling down, measures must be taken to ensure sufficient ventilation of the packaging container

to compensate for the vacuum. Stacking should also be avoided until the packaging container has completely cooled down.

Packaging containers for the transport of dangerous goods must be properly closed both after filling and before handing over for carriage.

5. Chemical stability

Our products without UN approval may only be used as packaging for dangerous substances and mixtures in accordance with Regulation (EC) no. 1272/2008 if the user ensures that the requirements set out in Article 35 of this Regulation have been adhered to. This inspection is to be conducted by the user under his own responsibility. In particular, it is to be inspected whether the respective content does not damage the material constituting the packaging and fastenings or can react with these to form hazardous compounds. You will find information on the chemical stability of basic materials that are used in our catalogue. Please follow the link: https://www.kautex. de/de/verpackung/katalog-referenzen

The filling product is then allocated (and hence evidence of chemical compatibility provided) either using the assimilation method described under ADR 4.1.1.21 or via allocation according to a laboratory method test.

6. Emptying

As packaging containers do not usually have a bottom outlet, they can only be emptied via the filler opening. This can be done independently or by using suitable pumps or suction devices.

When the content is poured out independently, there is a tendency for the packaging container to "gurgle" (content surge) so the container must be emptied with appropriate caution. If the packaging container is mounted on a surface when the content is emptied out, the surface should be such that it does not damage the packaging container. If larger packaging containers are also emptied in this way, appropriate levers and turning devices are to be used.

When emptying using a drum pump or suction device, ensure that the packaging container is standing on a level surface free of foreign bodies. The container must be secured to prevent it from tipping over. The extraction lances should be suitable for the size of the container and the diameter of the filler opening so that these do not damage the packaging container.

The emptying of the container should never be carried out under pressure. It should also be ensured that no vacuum forms in the packaging container during emptying.

7. Re-use

Packaging containers are basically designed for one-off use, or they can be reused depending on the design and the preceding use. The prerequisite is that before refilling and handing over for conveyance, the container is inspected to ensure it is free from corrosion, contamination or other damage.

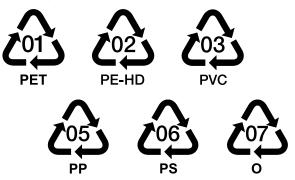

In any event, it should be ensured that the packaging container meets the same standards for re-use as it did before the initial filling. Every packaging container that shows signs of reduced strength must no longer be used. (ADR sub-article 4.1.1.9) The responsibility for inspection and re-use lies with the user.

8. Information

Further information are listed in the brochure of "Industrievereinigung Kunststoffverpackungen e.V." (also in english): http://www. kunststoffverpackungen.de/technische_broschueren_5079.html

9. Recyclingcode

According to 97/129/EG et 94/62/EG
